

## Lot Size Cheat Sheet

When you trade you need to decide on your lot size. Your lot size is the number of units in one basket. For example, one package of eggs equals 12 eggs. That would be one lot. This has been created so institutions do not need to buy millions of contracts but can buy lots instead.

### **All brokers including Etoro:**

All assets have lot size **one** including Gold (XAU), Silver (XAG), Oil (XTI), stocks and crypto.

### **Metatrader 5:**

When you trade indices, cryptos and commodities on Metatrader 4 or 5 it is slightly different since this is counted as Foreign Exchange (FX) trading.

**Gold** is called XAUUSD and has a lot of 100.

**Silver** is called XAGUSD and has a lot of 1000 on demo and could be 5000 when you are live (Make sure you double check).

**Oil** is called USOIL or XTIUSD and has a lot of 100.

**All other assets** have 1 as their lot size (US100, US30, US500 and cryptos). Currency pairs has 100.000 but we do not trade them.
