Investment Mastery Trading LTD

343

Module 1: Understand blockchain and cryptocurrencies

- What is the blockchain and what are cryptocurrencies?
- What are the benefits of Cryptos and what problem do they solve?
- Examples of how the blockchain is used
- Why is it important for YOU?
- What are the main types of cryptocurrencies?
- Where is the value of cryptocurrencies, how are they determined
- Are There any Drawbacks Investing in Cryptocurrencies?
- Is it Too Late to Get Into Cryptocurrencies - Have I Missed the Boat?

© Property of Investment Mastery. May not be reproduced in any way without written permission

344

Module 2: How to start Buying Cryptocurrencies

- How to start buying bitcoin and other Altcoins
- How to open an account on your Exchange and transfer your fiat money there
- How to add Two Factor Authentication (2FA) for security
- How to send money between your Exchanges
- How to use your Exchange to buy and sell cryptocurrencies with your fiat money
- How to set up a Coin exchange
- How you transfer money from one exchange to another vice versa
- How to make sense of the different order types on your exchange
- How to use your exchange on your phone

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

345

Step 1: Open an exchange

- Exchange your fiat money to bitcoin
- After you have bitcoin, you can buy all the other coins
- So we need to open a fiat exchange

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

346

Step 2: Transfer Fiat to your exchange

- Transfer your fiat money to your exchange
- You can use a Debit Card or a bank transfer

© Property of Investment Mastery. May not be reproduced in any way without written permission

347

Step 3 – Buy Bitcoin

- Once your fiat money has arrived, you can convert your fiat money to bitcoin
- We do this by buying bitcoin on your exchange
- After you have bitcoin, you can buy any coins on that exchange

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

348

Step 4 – Open a crypto trading account

- If you don't find the crypto you want on your exchange, it will be on other exchanges
- Therefore, open another exchange that has more cryptos

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

349

Step 5 – Transfer your bitcoin to the trading exchange

- Ensure that you send the bitcoin to the bitcoin wallet address of the trading account.

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

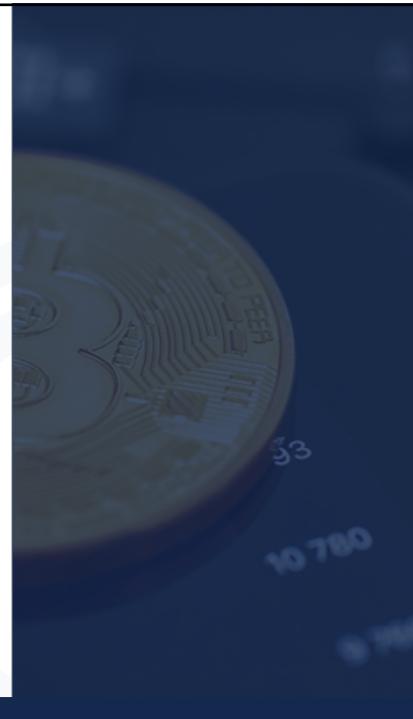

350

Step 6 – Buy any other coins you want

© Property of Investment Mastery. May not be reproduced in any way without written permission

351

Module 3: How to keep your cryptos safe in wallets and how to track them

How to store your coins/tokens and how to keep them safe

Hot Wallets

- How to use your hot wallet to store your cryptos
- How to access all your Ethereum ERC-20 tokens
- How to withdraw and deposit tokens between an exchange and a wallet

Cold Wallets

- How to set up your cold wallet, send and receive coins and tokens
- How to transfer ERC-20 tokens you bought from an ICO to your wallet

Track your cryptocurrencies

- How to setup, add wallets and exchanges to your Tracker
- How to use your Tracker

© Property of Investment Mastery. May not be reproduced in any way without written permission

352

Step 7: Store your cryptos in a wallet

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

353

Step 8 – Track your cryptocurrencies

CoinTracker

CoinStats

You Will Learn: (L)

The 5 ways of making money with Crypto and what strategies to use

Strategies for investing in cryptos

Staking and trading cryptos

Investing in start-ups and blockchain companies

Once we have opened up our accounts, we can start to invest in the coins.

All you need now is strategies.

Most people do not have a strategy which they have thought about in advance, written down and then follow to the letter.

That is the biggest mistake of all.

There are 5 ways to take advantage of the crypto markets
 And we use several strategies to take advantage of its
 every move

We suggest you MASTER one strategy at the time but that
 you use all of them eventually.

Let us dive into it!

361

Crypto Cost Average (CCA): How to invest in cryptocurrencies

- As the prices are falling we feather into our positions
- Make sure that the assets cannot go to **ZERO!**
- We only do this strategy on the biggest and safest cryptos!
- We are looking to make 50 % before taking the first profits

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

362

Small Cap Strategy: How to invest in the next bitcoin

- As the prices are falling we feather into our positions
- We do this in assets that we do NOT do CCA on which means that the asset could go to Zero. Therefore, allocate smaller amounts to these cryptos.
- We are looking to make 100 % before taking the first profits.

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

363

Invest in the shorter-term using the Contrarian Momentum Strategy

- As the prices are falling we feather in using an indicator
- Make sure that the assets cannot go to ZERO!
- We only do this strategy on the biggest and safest cryptos!
- We are trading with more money in order to make a quick 5 % before taking profits.

367

How to find a good crypto

© Property of Investment Mastery. May not be reproduced in any way without written permission

368

But before using a strategy, you need to know what cryptocurrency to buy.

When choosing cryptocurrencies, do your research.
Don't get caught up in the hype. When you are researching, remember to ask:

1. "What problem is it solving?"
If it doesn't solve a problem then why would anyone use it or buy it? And
2. "Does it have the right team to solve that problem?"

Bitcoin and Ethereum are the most widespread by far

Imagine them like the Reserve Currency of the crypto world – if you wanted to invest in other cryptos, then you have to buy bitcoin or ethereum with your local currency first

Then you buy the other cryptocurrencies with your Bitcoin or Ethereum.

If you don't want to buy the cryptocurrencies themselves, you can always buy a Bitcoin fund or Bitcoin tracker

I did this for my daughter in her Junior ISA and it went up multiple times the investment, making her tens of thousands in the last couple of years.

What are the signs of a 'bad' cryptocurrency

1. Me-too coins – these are coins that do exactly the same as already existing coins and don't really add any more benefits or USPs.

They are just copying what has already been done. Avoid these.

If, however, they are sufficiently different and do the same but do it in a much better or faster or cheaper way etc. then it might be worth considering.

2. Coins for specific industries

A perfect example is Potcoin.

I actually bought some but I regret it now because all they are saying is “here is a market and we are going to create a coin for this market so everyone can use this coin to buy marijuana.”

But in reality there is no real NEED for this coin.

It doesn't solve any PROBLEMS.

You can use Bitcoin or Monero or Ethereum instead.

Worse still, there are other coins like Dopecoin, Cannabiscoin, Hempcoin doing the same thing.

3. Teams that are either too small or unqualified – in reality it is not easy to make a start up successful, and the competition is only going to intensify.

It is best to check out the backgrounds of the team and see if they really do have the experience to pull off what they are suggesting in their whitepaper.

Also, the team needs to be large enough to handle this or at least they have to have plans to hire more relevant team members.

4. Low trading volume – it means that that not enough people are buying and selling.

This is not a good sign.

You want to see ever-increasing volume as the market is waking up to the opportunity.

If you take care of the above then you should avoid the majority of coins that are scams.

In Summary

What strategies should you use?

We have now gone through the 5 ways of making money with cryptocurrencies:

1. Investing with the Crypto Cost Average (CCA) and Small Cap Strategy
2. Investing in the short-term with the Contrarian Momentum Strategy (CM)
3. Staking cryptos and earning dividend
4. Buying into Start-ups

We have also covered what to NOT look for when choosing a crypto:

1. Me-too coins: Does the same as existing coins
2. Specific industry coins
3. Teams with not enough experience
4. Too low volume

You Will Learn: (L)

-  What NOT to do when trading and investing
-  Mistake 1: Not understanding what you invest in
-  Mistake 2: Take too large risks
-  Mistake 3: Try day trading too quickly

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

382

Most people do not have a strategy which they have thought about in advance, written down and then follow to the letter.

That is the biggest mistake of all.

Here are a few mistakes you should try to avoid at all costs:

Mistake 1:

They invest in something they don't really understand or believe in long term.

Therefore, they are too easily tempted to sell if the price begins to fall in the short term.

YOURCRYPTOCLUB

To counteract this mistake, start by sticking to the major ones in terms of market capitalisation ie top 5 for safety first while you test the market (www.coinmarketcap.com).

Investment Mastery Trading LTD

386

Mistake 2:

They think they have missed the boat on the most successful cryptocurrencies, whose price has run up – think Bitcoin and Ethereum – and so invest in less established, smaller and more speculative coins just because the price is much cheaper than that of Bitcoin and so have more of an upside.

While you can put a smaller amount of your money into speculation, the majority of your money needs to go into any of the pull-backs that occur on the more established cryptocurrencies. A pull-back is a fall in price significant enough for us to enter e.g. 10% from a recent high.

Mistake 3:

They try to day trade and profit from short term market movements, both up and down.

While this can undoubtedly be profitable for someone who knows what they are doing, this is absolutely lethal for anyone who doesn't know proper risk management and who doesn't have a strategy or has a strategy without the proper risk:reward ratios.

Anyone who doesn't have this is going to get killed by the volatility.

There are many different strategies you can use. Fundamental analysis relies on data to determine the long term trend of the market and, therefore, there is very little to do.

Technical analysis, on the other hand, is the study of short term movements in the price. More on this later.

Some people claim that technical analysis, often made up of a myriad combination of hundreds of different chart patterns and indicators to help you enter the market, can give you an edge.

Maybe.

I particularly like the picture below where a trader makes fun of technical analysis.

It says:

"I have decided to brush up on TA (Technical Analysis) so I can be an expert. Looks like a Yeti pattern is forming. I can confirm \$150 price target!"

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

393

For people starting out, technical analysis can be confusing. So what to do? The answer is: keep it simple and the majority of the money for investing

You Will Learn: (L)

The 2 ways of selling when you are in profit

1. According to set levels, such as selling 20% when up 20% in profit
2. Selling when you see resistance and support levels

This, of course, is the holy grail of trading –
WHEN to get out of the trade.

We are at the beginning of cryptocurrencies as a technology, so there could be enormous upside potential.

We are looking at the maximum upside.

If there is one thing I have learned it is that you have to allow your winners to run if you want to make a lot of money.

We are definitely holding for the long-term upside potential.

In a bull market and in the Early Adopter stage of cryptocurrencies, I don't really want to be selling.

Why?

I am not really looking at selling at all, since we are in a bull market and if I get out I will miss out on the big moves that comes when you least expect it.

However, to just buy and hold is a pretty lazy strategy too. You don't want to be up massively and then lose all the profits you made.

So we have to consider taking some profits now and again in order to take money off the table and rotate it back into other cryptos that might be at a lower price.

For example, if you are in profit and have made over 50 - 100%, it is time to think about setting a stop loss just below it to sell a part of your holdings and take some profit, say 20%.

Another way to make money is a little more advanced and it means watching it on a daily basis if you see the price continuously going up and down i.e. going sideways and not really hitting new highs, then you can start to trade within that 'channel' of high and low prices.

So you are getting in near the bottom and out near the top – in effect trading – whilst always keeping your main amount invested but start trading a smaller portion within that range.

It is important to do this but most people do not do this.

If you don't do this then you don't make any money while markets go sideways which is crazy when you consider that markets might go sideways for many months, even years on occasions.

If you don't trade the range while waiting for the eventual upturn, you have missed out on that time ... and profit.

This is the optimal strategy but takes some experience. Not a lot of experience but a little.

In Summary

How to make money and when to sell

When trading and investing it is very important to buy to be in the game but also to have a strategy for selling. We never want to sell everything but milk the cow as the price goes up in order to take money off the table. You can do the following:

1. Consider selling 20% for every time the price moves up 50-100%
2. Use previous resistance lines to take profits off the table

You Will Learn: (L)

How much of your net worth to allocate for cryptos

How much to allocate for investing vs trading

How much to invest into start ups vs more stable coins

How much to allocate for dividend/saving/staking

Overall, there is a school of thought that says that investing in ICOs is not investing at all – it is pure gambling and it is best to wait until after the ICO ie after the coins have gone public.

I certainly agree with the first part of that statement – it is gambling to invest in a brand new start-up that hasn't even built its product at the start of a new technology revolution.

I also agree that you would be better off looking at the ones that have gone public as they have more chance of not being scams.

However, I don't believe that is all we should be doing.

I believe that in terms of asset allocation a tiny amount of your portfolio should be invested on ICOs because the returns could be gigantic.

So what's the ideal percentage?

This will, of course, depend on how old you are, how much risk you are willing to take and how aggressive/conservative you want to be.

However, for me, it is the following:

In terms of asset allocation I am looking at putting 5% of my capital into ICOs.

The reason is that we have no idea:

1. Where this industry is heading.
2. Which ICOs are going to be successful.

Therefore investing in ICOs is EXTREMELY speculative.

However, I am still open to putting in a small amount every month, say £500+.

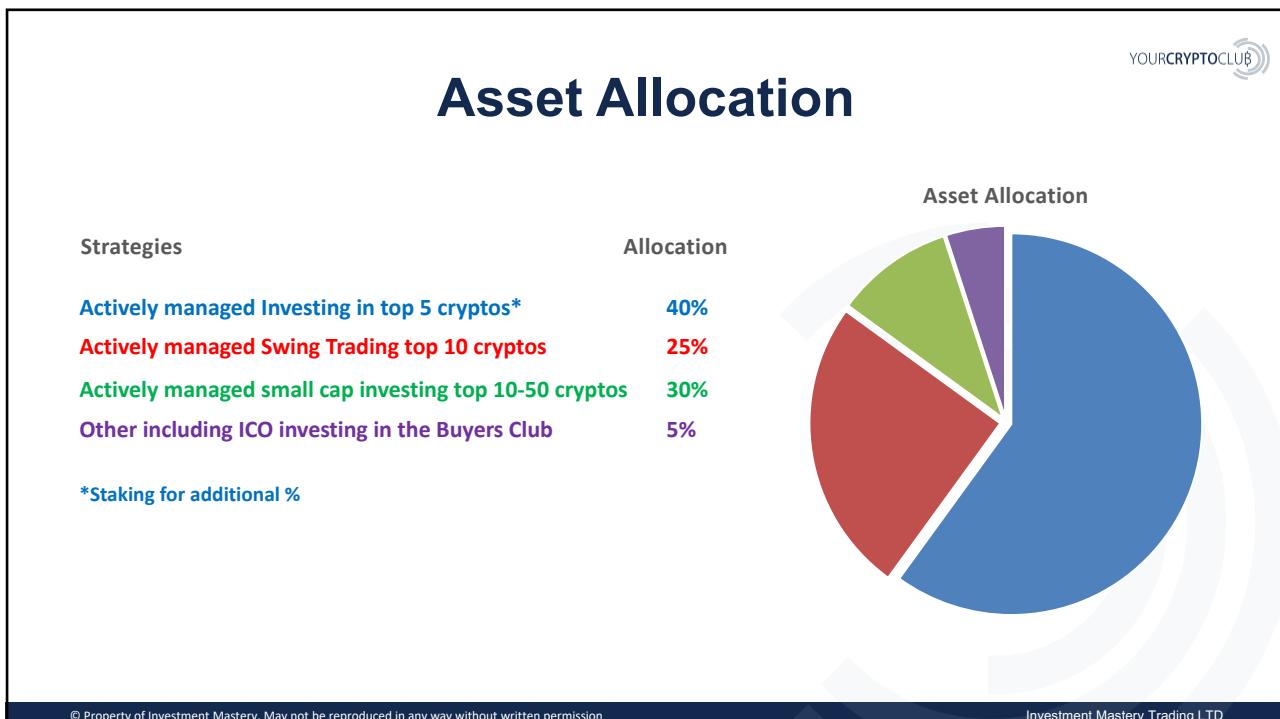

I am looking to spread my risk among a minimum of 20 different ICOs.

I will put more in if I have met the people and get a good feeling about it, or the white paper makes a lot of sense and it is really solving a problem and has the team to build the required solution.

So if I bought into 20 of them and they all failed but one of them exploded, then I would risk £10,000 to make £50,000 or even more.

Let's break this down:
Cryptocurrencies are risky which is why we recommend to only invest 10-20 % of your net worth.

That is 100 % of the crypto allocation which we will breakdown below:

417

418

This is just a guideline on what we are doing – you need to come up with your own system that works for you.

In Summary

How much money do you allocate?

In this chapter you have learned how you can allocate your portfolio.

Remember this is 100% of the total of my pot allocated to cryptocurrencies.

Since cryptocurrencies are speculative, this '100%' shouldn't be more than 10% of your entire portfolio.

So if you lost the entire 100% then you would have only lost 10% of your total portfolio.

Investment Mastery Trading LTD

424

Strategy 1. Crypto Cost Average (CCA): How to invest in cryptocurrencies

- This is an investment strategy, so we only invest in the biggest and safest cryptos
- Only invest in cryptos that cannot go to **ZERO**
- As the prices are falling we feather into our positions
- We are looking to make 50 % before taking the first profits.

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

425

CCA Steps

- Step 1: Find an asset that cannot go to zero
- Step 2: Find the highest point and measure the drop and entry points
- Step 3: Decide how much money to allocate to the investment
- Step 4: Decide what order to use (Limit or Market) and enter the trade
- Step 5: Exit your position gradually by feathering out

© Property of Investment Mastery. May not be reproduced in any way without written permission

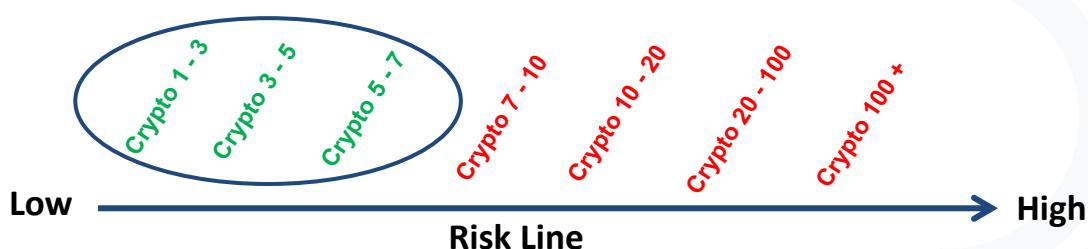

Investment Mastery Trading LTD

426

CCA Step 1 – Find a crypto that cannot go to ZERO

- Look at Coinmarketcap.com and find the top 5 cryptocurrencies there
- Make sure you believe that the asset cannot go to **ZERO**
- Do your research!
- Ignore any stablecoins - the top 5 cryptocurrencies only

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

427

CCA Step 2 - Find the highest point and measure the drops and entry points

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

428

CCA Step 3 – Decide how much money to allocate to the investment

- Example: If you allocate 20,000 USD for CCA Strategy, simply divide evenly amongst maximum 5 cryptos
- Invest 4,000 USD in total for each crypto and prepare for a 70 % drop... the total of ALL your entries will add up to 4,000 USD

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

429

CCA Step 3 – Decide how much money to allocate to the investment... Cont.

- Add 25 % more money for each entry

Contrarian Momentum Strategy

- Step 1: Find an asset
- Step 2: Decide What Strategy to use
- Step 3: Decide Allocation
- Step 4: Enter the trade
- Step 5: Trade Management

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

456

Step 1: Find an asset

Use only one of the following 2 pairs when starting out:

Either

- a) ETH/fiat or Stablecoin
- OR
- b) BTC/fiat or Stablecoin

Because ETH and BTC drive the market and are the safest.

Step 2: Decide Time Frame

Decide which strategy to use:

- No flexibility of time: 4-hour candle and RSI Indicator* if you have less flexibility throughout the day.
- More Flexibility throughout the day: 1-hour candle RSI Indicator* if you have more flexibility.

* RSI setting is always 14 no matter what timeframe you are using

Step 3: Decide Allocation

Choose if you want to enter 3 or 5 times, in order to see how many times as you want to enter. Use the Contrarian Momentum Calculator to work out the levels and how much to invest.

- Option 1: Safer
 - Decide the amount you want to invest in total
 - Divide into 5 parts and invest 25% more each time it falls
- Example:
 1. 100 GBP
 2. 125 GBP
 3. 156,25 GBP
 4. 195,31 GBP
 5. 244,13 GBP
- In total: 820,69 GBP

Step 3: Decide Allocation. Cont...

- Option 2: A bit more risk
 - Decide the amount you want to invest in total
 - Divide into 3 parts and invest 25% more each time it falls
- Example:
 1. 250 GBP
 2. 312,5 GBP
 3. 390,6 GBP
- Total: 953,1 GBP

Relative Strength Index (RSI)

461

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

462

Step 4: Enter The Trade

- ONLY Buy to enter if RSI is under 30 (undervalued) AND 2 candles in a row close while the RSI is still below the 30 line

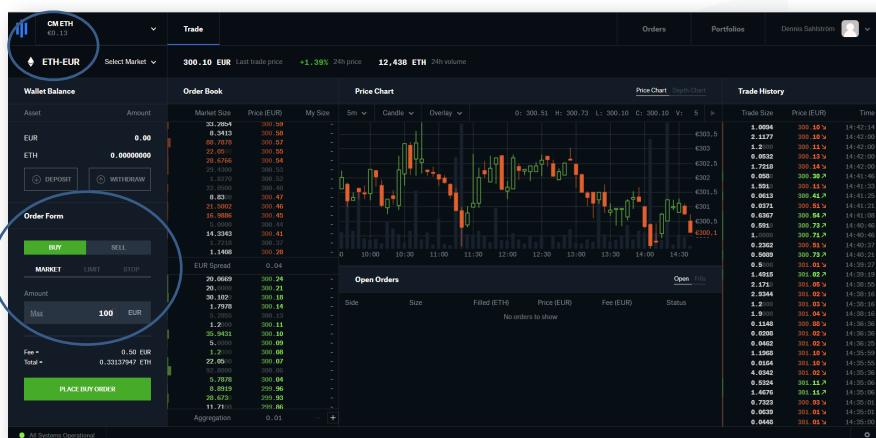

© Property of Investment Mastery. May not be reproduced in any way without written permission.

Investment Mastery Trading LTD

463

Step 4 Enter The Trade. Cont...

- Market Order

© Property of Investment Mastery. May not be reproduced in any way without written permission.

Investment Mastery Trading LTD

464

Step 4: Enter The Trade. Cont...

- Either price goes up 5% and you take profit
- OR the price goes down
- We only enter 2nd time if indicator rises above the 30 line & falls below again
- Ensure a difference of 5% from each entry to avoid entering at the same price.

465

Step 4: Enter The Trade. Cont...

Important Points

- When entering a second and third time, add an additional 25% more funds. Remember to use the Contrarian Momentum Calculator to work out the levels and how much to invest.
- After entering a second time, set an alert at the take profit level, 5% above the combined average entry price (the broker will show you the combined average entry price). This allows you to focus on more important things in your life and you will be notified when it is hit.

466

Step 4: Enter The Trade. Cont...

Important Points

- Repeat step number 4 as many times as you have decided depending on your allocation.
- Remember, you are adding 25% more funds each time you enter.
- The more times you enter, the more you bring your average price down and therefore your 5% total average profit target comes down also. Therefore, each time you enter again you must change your total average profit target. Set a new alert each time.

Step 5: Trade Management

Take Profits: Decide when to take your profits. There are 2 options:

- a. No flexibility of time: As soon as you are in the trade. Set a take profit at the 5% profit. Important, do it NOW while you remember.
- b. More Flexibility during the day: Set an alert at 5%, do it NOW and do not forget. When that is hit then put the stop loss 1% above candle that is taking you up to a 5% profit.

Use the calculator

What is staking and how you can earn dividend

What you can expect and how much you can make

Other ways you can make residual income from cryptos

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

475

Let's First Talk About Dividends

- Dividends - A dividend is the distribution of some of a company's earnings shareholders. Using this as a strategy to make money from the stock market is also called 'Income Investing'.
- For example, If you'd invested \$10,000 in McDonald's in 1990, your stake would've been worth almost \$230,000 by the end of 2019. But, more importantly, the dividend would've grown from just \$96 per year to a healthy \$5,482.
- Now, imagine doing that with a portfolio of McDonald's-like stocks.

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

476

How much would you make from dividend?

Let's look at more examples:

- The Apple stock has compounded at 18% per year since its IPO price. So, if you had invested \$10,000 in Apple during this time, you would have about \$6.7 million. That's not all! A 1% dividend would give you an extra \$67,000 per year!
- Also, a \$1,000 investment in Microsoft during its IPO 1986, would be worth more than \$1,6 million today. That's not all! A 1% dividend would mean an extra 16,000 USD per year.

© Property of Investment Mastery. May not be reproduced in any way without written permission

477

What is Staking?

Staking gives holders of the coin decision power on the network. Therefore, by staking coins, you gain the ability to vote and generate an income

This is quite similar to how someone would receive interest for holding money in a bank account or earn dividend from stocks

483

In Summary

Staking

Staking is a new way to earn dividend. If you would have invested early in stocks such as Apple, you could have made a fortune from the growth AND from the dividend you would now be earning.

We stand in front of a similar opportunity in cryptos where we can get in **VERY** early and make a tremendous amount of money from the growth, as well as from the future dividend/staking.

Tokens in general are divided into two categories

- **utility tokens and**
- **security tokens.**

Utility tokens are tokens that promise the future use of a product or service. They aren't necessarily meant to be an investment; they have a utility. BUT if the use-case increases, the price might also increase.

Security Tokens are much like stocks and shares and is more regulated but you own a part of the company you invest in.

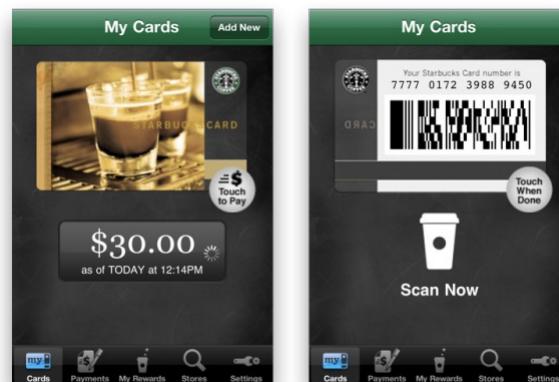

SECURITY TOKEN **VS** UTILITY TOKEN

Ownership of asset
Investors (expecting profit)
Regulated offerings - KYC

Access to protocol
Purchasers
Unregulated crowdsales

Investment Mastery Trading LTD

498

Are there any drawbacks to investing in Crypto Start-Ups? Yes, there are many!

© Property of Investment Mastery. May not be reproduced in any way without written permission

499

The idea for the start-up is written on a ‘white paper’ – often even without any proof of work – and people invest on the basis of what they read in the white paper.

Since investors are pouring in their money in the hope of becoming rich through ICOs/STOs/IEOs, some of these start-ups are taking advantage of this situation.

They collect the money but don’t actually get to the work of creating the product, yet alone actually turning the business into a profit-making enterprise.

Then they just disappear into the ether.

Mycelium ICO was a particularly bad example of this. Its team members just disappeared after raising the money, and later it was reported they used the funds to pay for their own vacation.

This is why there is so much talk of regulation and self-regulation.

The ones that are legitimate and really do want to create a product may have the problem of insufficient technical knowledge or support.
They may be underqualified and lack the experience of building up a blockchain business.

This is not the only way investors have lost money. \$7 millions were stolen as CoinDash's ICO started. Right before the start of the token sale, their website was hacked and the ICO wallet address was changed to the hacker's address.

The solution to mitigate this?

Research and asymmetric risk.

Asymmetric risk – Amazon Example

- Most people think that Amazon became a world dominator by making all the right decisions. But CEO Jeff Bezos has made as many bad investments as good ones. The few he got right were home runs, though...
- Jeff Bezos is famous for taking Amazon and turning it into a \$1 trillion company.
- Those who invested in the initial public offering (IPO) are up over 3,600% — turning every \$10,000 into over \$370,000.

- But what many people don't know is that in its early days, Amazon made a series of e-commerce investments. This was part of its strategy to diversify its offerings.
- Perhaps the most famous is Pets.com. Yes, Amazon was an investor.
- Amazon took a 50% stake in 1999 for an undisclosed amount. It then poured in another \$50 million a few months later.
- Fast forward to 2002... when Pets.com announced it was going out of business. Amazon's loss: 100%.

- Then, there was Living.com. The award-winning online furniture store went live in 1999. In 2000, Amazon took an 18% stake in the company.
- But the company didn't last long. It simply ran out of funds. And in 2001, it closed its doors. Another dud investment for Amazon.
- Not all investments were complete losers, though. One example is Ashford.com, an online luxury retailer specializing in watches. Amazon invested \$10 million in 1999 for a 16.6% stake in the retailer.
- In 2002, GSI Commerce bought out Ashford.com for \$14 million. Assuming its ownership didn't change, Amazon was able to recoup about \$2.3 million. That's only a 77% loss.

Winners

- Bezos taught us an important lesson with these investments...
- You see, he was smart enough to know the internet was going to be big. But he was also smart enough to know it's impossible to predict the ultimate winners.
- That's why we diversify, take reasonable position sizes, and remind you over and over to do the same.

- And that's what Bezos and Amazon did. They made a series of strategic investments and never bet everything on one idea
- As a sharp analyst said at the time, "Even if all of Amazon's investments eventually fail, the company has not lost a whole lot."
- Some successful investments they made have been in Audible, Zappos, Wholefoods Market and Bibo
- And the numbers bear out this thesis...
- Let's say you make 10 investments of \$400 each and then had the following returns: -100%, -100%, -100%, -100%, -100%, -77%, 0%, 0%, 888%, and 3,600%.
- You would have made: **\$15,692** even though you would have lost 6, 2 breakeven and 2 wins out of 10 investments.
- **This is EXACTLY what we do in the Buyers Club!**

In Summary

Initial Coin Offerings

You have now learned how ICOs work. They are new business ideas that we get to invest in very early. Since the risk is very high BUT could pay off massively, we need to consider two factors:

1. Research: we could lose everything so doing our research properly is a must.
2. Asymmetrical Risk: Investing in ICOs are gambling BUT could pay off massively and therefore, it is enough to only invest small amounts.

2. Send transaction details to sensuminvestments@gmail.com with the following information:

- Full Name:
- Amount invested:
- Date when you invested:
- Transaction Hash / Link for transaction:

Term:

- Deadline: 30th of September
- Min Investment: 250 USDC
- Max Investment: 1000 USDC
- Discount: 70%
- Token Price: 0.05 GBP Cents per token (Looking to launch for 0.15 USD cents in 2021 even though it is very difficult to say now)
- I will take a minor 5% for my time and effort. It is not much but something to keep my motivation up :-).

2. Go to the forum... Cont.

Most of the times we raise money in a Stablecoin, such a USDC which you send to the designated wallet

Market Cap	Volume (24h)	Circulating Supply	Total Supply
\$2 508 471 562 USD 229 563 BTC 6 795 391 ETH	\$395 498 404 USD 36 194 BTC 1 071 396 ETH	2 507 149 164 USDC	2 513 902 905 USDC

4. Get the tokens sent to you

In order to receive your tokens you need to create an Ethereum wallet. You can use a hard wallet (such as ledger) or an online wallet (such as Metamask)

Ex: 0x89205A3A3b2A69De6Dbf7f01ED13B2108B2c43e7

All Ethereum's public addresses starts with 0x....

You need to provide the address to the Buyers club email, which you find on the forum

4. Get your tokens... Cont.

Most of the time, the company has an ERC-20 token so you need to create an ETH-Wallet so you can receive your tokens.

The screenshot shows the Metamask wallet interface. At the top, it says "METAMASK". On the right, there is a dropdown menu set to "Main Ethereum Network" and a network selection icon. Below this, a token card for "Money on Chain" (0x7527...C254) is displayed, featuring a diamond icon. The balance is shown as "0 ETH" and "\$0.00 USD". At the bottom of the card are two buttons: "BUY" and "SEND". At the very bottom of the screen, there are tabs for "Assets" and "Activity".

5. Sell them or keep them

After the ICO/STO/IEO has listed on an exchange, the start-up becomes a cryptocurrency and you can trade it just as you would do with another crypto.

We are holding for the long term but it could be a good decision to sell the initial investment to then be in a risk free trade

In Summary

Investing in ICOs with the Buyers Club

1. Listen to the interview
2. Go to the forum and follow the directions
3. Get updates on the forum
4. Get the tokens sent to you
5. Sell them or keep them

Remember to invest small amounts and to do your research

Value Cost Average (VCA) Steps

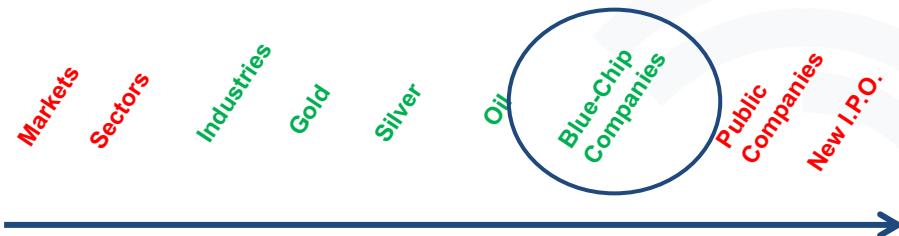

- Step 1: Find an asset that cannot go to zero
- Step 2: Find the highest point and measure the drops and entry points
- Step 3: Decide how much money to allocate to the investment
- Step 4: Decide what orders to use (Limit or Market) and place it
- Step 5: Trade Management

Investment Mastery Trading LTD

528

VCA Step 1 - Assets that cannot go to zero

© Property of Investment Mastery. May not be reproduced in any way without written permission

Investment Mastery Trading LTD

529

530

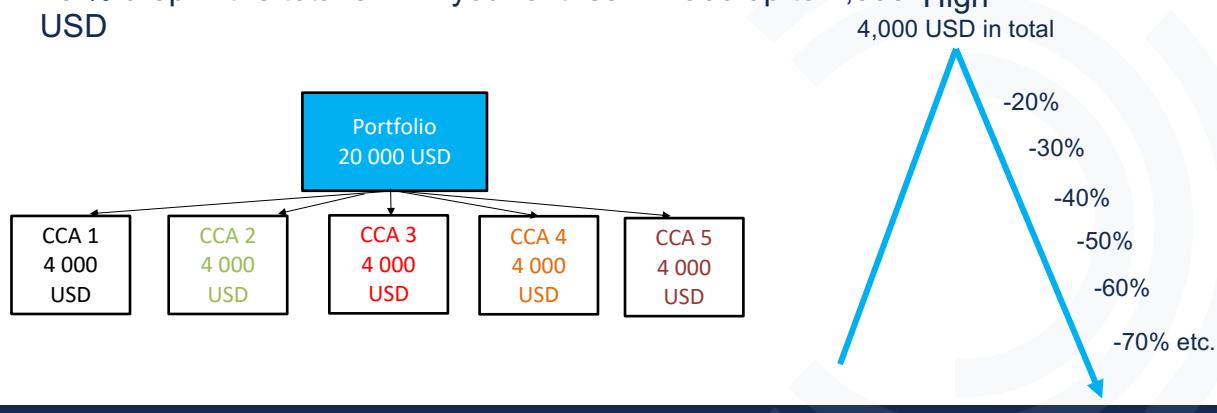

531

VCA Step 3 – Decide how much money to allocate to the investment

- Example: If you allocate 20,000 USD for the VCA Strategy, simply divide evenly amongst maximum 5 opportunities
- Invest 4,000 USD in total for each company and prepare for a 70 % drop... the total of ALL your entries will add up to 4,000 **High USD**

Investment Mastery Trading LTD

536

VCA Step 5 – Trade Management

- We are aiming for a 15% gain from our average cost per share
- When the 15% has been reached, place a stop loss for the very first time right underneath
- Place the stop loss 1% under the candle that has reached the 15% profit mark
- This allows our profits to run
